EDUCATION

Utah State University, Jon M. Huntsman School of Business Logan, UT
Bachelor of Science, Information Systems – Data Engineering Emphasis; Minoring in Data Analytics May 2026

- **GPA: 3.73**, while working 35 hours per week
- Member: Association for Information Systems (AIS), Student Organization for Cybersecurity, Analytics Solutions Center

TECHNICAL SKILLS

- **Data Engineering Core**: Python (Pandas, NumPy, APIs), SQL (SQL Server, MySQL, PostgreSQL), Excel Power Query, advanced formulas), OOP, Data Structures & Algorithms, Dimensional Modeling, Data Warehousing
- **Cloud & Tools**: AWS, Linux (foundational), GitHub, Jupyter Notebooks, Snowflake, dbt, Docker, kiro, Cursor, Databricks
- **Database & Visualization**: ERD design (Lucidchart, Figma), Tableau Desktop (certified), Power BI
- **Data Pipelines**: Web JSON/API, ETL workflows, structured and unstructured data processing

PROJECTS

Cryptocurrency Arbitrage Trader 2025

- Developed a Python-based crypto arbitrage detection program using NetworkX graphs and live API data to identify optimal multi-currency exchange paths and detect dis-equilibrium cycles.
- Automated data collection and storage of daily exchange-rate snapshots for 13 cryptocurrencies in CSV format, organizing datasets for analysis.
- Implemented trading logic by linking arbitrage signals to a trading API (e.g., Alpaca) to execute real-time paper trades on profitable currency-exchange cycles.

Global Religious Landscape Dashboard 2025

- Cleansed, merged, and transformed datasets using Pandas and Power Query to prepare accurate and analyzable data.
- Designed and developed an interactive Tableau dashboard and Story applying layout, color, typography, and Gestalt principles to visualize spatial, trend, and magnitude insights.
- Created an executive summary and delivered a 4-minute presentation synthesizing data insights, credibility, and policy implications for a UN-style audience.

Sportsbook Data Engineering Project – Group Project, 2 members 2025

- Designed and implemented a fully relational PostgreSQL data mart integrating multi-source sportsbook data (SQL Server + CSV), including schema design, ETL pipelines, ERD creation, and a comprehensive data dictionary.
- Engineered advanced data transformations for betting logic, including commission calculations, outcome determination, spread/over-under tagging, and game-level enrichment for analytics.
- Validated the data mart through complex SQL analytics and statistical modeling, building multi-query performance tests and linear regression models to predict customer value using engineered features and correlation analysis.

Dimensional Modeling & Data Warehouse Implementation 2026

- Designed a conformed dimensional model and BUS matrix for sales and marketing data from RDS and S3, loaded into Snowflake via Fivetran, and transformed with dbt.
- Applied dbt tests (unique, not_null, accepted_values, relationships) to ensure data integrity, scheduled daily Fivetran syncs, and automated dbt workflows for continuous updates and maintainability.
- Built interactive Power BI dashboards to track sales performance and marketing email conversions, providing actionable insights for leadership and demonstrating a fully functional, scalable, end-to-end data warehouse ecosystem.

WORK EXPERIENCE

Analytics Solutions Center – Utah State University Logan, UT
Data Engineer
Client: Lee's Marketplace Jan 2026 – Present

- Mapped data flows across 7 business systems, identifying integration gaps and automation opportunities
- Worked in a small team to redesign proposal for a Power Automate, Azure SQL, Power BI architecture and helped present findings to senior stakeholders and company management
- Contributing to ETL pipeline development, dashboard builds, and system documentation for live client-facing data modernization engagement
- Coordinating implementation readiness including Azure SQL database configuration, Power Automate environment setup, and Business Dynamics permission planning

ScyTek Laboratories Logan, UT
Shipping Quality Control Aug 2022 – Present

- Collaborated with cross-functional teams of 20 employees to identify and resolve shipping data inaccuracies
